

# COMMERCIAL/INDUSTRIAL COLOR CHART

**Final color selection should be made from actual color chips.**

- See the product selection chart for gauge and finish availability.
- All products are available in smooth or embossed finish.
- Trim is available in all colors.
- Review the sample warranty for complete performance attributes and terms and conditions.

## SIGNATURE® 200 Standard Colors

26- AND 24- GAUGE MATERIAL

**SILICONIZED POLYESTER**  
Polar White is a Straight Polyester.

\* Also available in 29-gauge  
\*\* Minimum quantities and/or extended lead times required for 24 gauge. Please inquire.

## SOLAR REFLECTIVITY (SR)

Solar reflectivity or reflectance (SR) is the ability of a material to reflect solar energy from its surface back into the atmosphere. The SR value is a number from 0 to 1.0. A value of 0 indicates that the material absorbs all solar energy and a value of 1.0 indicates it is all reflected. ENERGY STAR® requires SR testing of both new and aged roof products. New products must have an SR value of 0.25 or higher for steep slope (above 2:12) roofing and an SR value of 0.65 or higher for low slope (2:12 or less) roofing. Aged testing takes three years to complete, so not all products that meet the initial requirements are qualified. For more information, please visit [www.energystar.gov](http://www.energystar.gov)

## SOLAR REFLECTANCE INDEX (SRI)

The SRI is used to determine compliance with LEED requirements and is calculated according to ASTM E 1980 using values for reflectance and emissivity. Emissivity is a material's ability to release absorbed energy. To meet LEED v3.0 requirements, a roofing material must have an SRI of 29 or higher for steep slope (above 2:12) roofing and an SRI value of 78 or higher for low slope (2:12 or less) roofing. For more information, please visit [www.usgbc.org](http://www.usgbc.org)
